# Wilkinson Microwave Anisotropy Probe (WMAP) 9-year data release.
# WMAP 9-Year Combined Power Spectrum, version 5.0 (December 2012)
#
# References: - WMAP Explanatory Supplement: http://lambda.gsfc.nasa.gov/
#             - Bennett, et al. (2012)
#             - Hinshaw, et al. (2012)
#
# Column 1 = multipole moment l
# Column 2 = TT power spectrum, units =  $\mu K^2$ , =  $l(l+1)/2\pi * C_l$ .
#             This uses the maximum likelihood of the marginalized distribution
#             at that l, for l up to and including 32.
#             For  $l > 32$ , the  $C^{-1}$  estimate is used.
# Column 3 = 'Error' derived from diagonal terms of Fisher matrix, units =  $\mu K^2$ .
#             Included only as an estimate of their magnitude. The
#             multipole moments are slightly coupled, so a correct
#             treatment of errors requires use of the entire Fisher matrix.
# Column 4 = portion of column3 error attributed to measurement errors,
#             in "2SN + NN" form, units =  $\mu K^2$ .
# Column 5 = portion of column3 error attributed to cosmic variance,
#             assuming the best-fit LCDM model
#
